SUMMARY

Software Engineer specializing in backend systems, distributed architectures, and AI-powered applications. Experienced in building production-grade APIs, microservices, serverless platforms, and developer tools using Node.js, TypeScript, AWS, Kafka, Redis, PostgreSQL, and React. Passionate about designing reliable systems that scale.

WORK EXPERIENCE

Software Development Engineer | ActualI (TuneNexus Pvt. Ltd.)

May 2025 – Apr 2026

Full-time

Gurgaon, Haryana

- Standardized REST request/response contracts across 12+ API endpoints using typed schemas, request validation, and exponential-backoff retry logic, reducing production API errors by 45% within the first release cycle.
- Built a shared React Native component library with 15+ reusable UI components and optimized rendering across four feature modules, reducing UI frame drops by 38% while improving development consistency.
- Strengthened application reliability and API security by optimizing asynchronous data flows and implementing JWT authentication, request sanitization, and rate limiting, reducing Android ANRs by 30% and audit security findings by 40%.

Full Stack Developer | Craftsman Lab

Mar 2024 – May 2025

Part-Time

Remote

- Developed and deployed 3+ production web applications for commercial and government clients using Next.js, Node.js, PostgreSQL, and Tailwind CSS, reducing average delivery time from 6 weeks to under 2 weeks through reusable templates and shared components.
- Designed and implemented a role-based CRM platform supporting 4+ user roles, 1,000+ customer records, and booking workflows, replacing spreadsheet-based operations with a centralized dashboard while maintaining all time application availability.

PROJECTS

AI Powered Content Brief Generator

Mar 2026 – June 2026

- Built a serverless platform that generates SEO content briefs from URLs using GPT-4, Redis Bull, AWS Lambda, and API Gateway, supporting 500+ concurrent content generation jobs.
- Implemented credit-based usage tracking with idempotent quota management and persistent job history, optimizing Lambda execution through layer caching and scheduled warming to keep cold-start latency below 300 ms.

Intelligent PR Review Platform

Oct 2025 – Jan 2026

- Built a GitHub App that automates pull-request reviews by parsing code diffs, chunking large patches to fit LLM context limits, and publishing inline suggestions through GitHub's Checks API across 300+ validation pull requests.
- Designed a fully type-safe backend using Next.js App Router, tRPC, Prisma, and PostgreSQL, implementing idempotent webhook processing with GitHub delivery IDs to eliminate duplicate reviews and ensure reliable event handling.

API Gateway & Microservices Platform

June 2025 – Aug 2025

- Built an API Gateway routing 10K+ requests/min across 5 microservices, leveraging Redis caching, connection pooling, and circuit-breaker patterns to maintain P95 latency below 80 ms.
- Integrated Kafka-based asynchronous messaging and Prometheus observability across distributed services, improving fault isolation and reducing production incident MTTR by 50% while maintaining 99.9% availability.

SKILLS

Programming: JavaScript, TypeScript, Python, C++, SQL, HTML, CSS

Frameworks & Backend: Node.js, Express.js, Next.js, FastAPI, Flask, React.js, React Native, REST APIs, tRPC, Prisma, Microservices

Cloud, DevOps & Distributed Systems: AWS (EC2, Lambda, API Gateway, S3), Docker, GitHub Actions, CI/CD, Serverless Applications, Kafka, Redis, Prometheus

AI & Data Systems: OpenAI API, GPT-4, RAG Pipelines, Semantic Search, LLM Application Development, Redis Bull

Databases & Developer Tools: PostgreSQL, MongoDB, SQL Server, Git, GitHub, JIRA, Linux, Postman, JMeter

EDUCATION

Prof. Ram Meghe Institute of Technology and Research

Aug 2021 – May 2025

Bachelor of Engineering, Computer Science and Engineering | CGPA:7.88/10.0

Amravati, Maharashtra

ACHIEVEMENTS

2nd Place — Maha Metro Analytics Hackathon, GDSC Web Lead — Mentored 120+ students in web development
